WEATHER OF CONCERN

Weather of Concern

- A strong upper level ridge of high pressure centered over the Great Basin will bring record challenging heat to the central California interior during the next few days. Widespread triple digit heat can be expected in the San Joaquin Valley, lower foothills and the Kern county desert through at least Tuesday. Thermometer readings will climb as high as 112 degrees in the valley and lower foothills and as high as 114 degrees in the Kern county desert. An Excessive Heat Warning is in effect through Tuesday in the valley, foothills and the Kern county mountains and is in effect through Wednesday in the Kern county desert.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Hot and Very Dry with Poor Overnight RH Recovery and Light Offshore Winds Mid and Upper Slopes Coastal Range through early Tuesday. Dry and Breezy NE and Far Eastside PSAs late Tuesday. Strong high pressure will produce hot and dry conditions throughout the North Ops region through Tuesday. The marine layer will be shallow and only areas along the immediate coast will get relief from the hot and dry weather. Poor humidity recovery (to 20-30%) will be common on mid and upper slopes, especially in the coastal range where light offshore winds will prevail during nights and mornings through early Tuesday. Afternoon temperatures will be 10-15 degrees above normal with RH dropping to 5-15%. Air quality will further diminish due to stable conditions and stagnant air, especially in valleys and canyons near active fires.

The high pressure will weaken a bit by late Tuesday and a stronger onshore push will develop as a weak low pressure trough approaches. S-SW winds will increase late Tuesday from the Cascade-Sierra crest east, with gusts reaching 30-35 mph for a few hours. There is a slight chance of thunderstorms in far eastern areas late on Tuesday as well. The trough will move overhead Wednesday through early Thursday and allow temperatures to drop a bit, but they will still remain above normal. High pressure will build back over the region late Thursday through Saturday.

SOUTHERN CALIFORNIA

Hot and dry through next weekend. Record or near record heat along with low humidity will occur across the region through next weekend as strong high pressure sits over the Great Basin. Maximum temperatures will be in the 90s to 102 across the mountains and between 102 and 115 in the valleys. Minimum humidity will be mainly in the teens through Thursday and then increase to 15% to 30% Friday through next weekend as more monsoonal moisture pushes into the region. Isolated showers and thunderstorms will form near the Colorado River this afternoon and then spread to the Sierra and to the mountains and deserts of Southern California Monday through Thursday. The shower and thunderstorm activity will increase and affect most of the region Friday through next weekend. Winds will be light through next weekend, except there will be strong and erratic winds in and near any thunderstorms.
